

very pleased to have. They
will be useful for reference
to generations yet unborn!

I Enclose your slide, which
is, as you mark it, a mica-trap.

The mica is a bit smashed: there
is a lot of orthoclase felspar,
often strongly zoned, not a little
Plagioclase & a good deal of
rather finely divided Quartz.

I shall be at your service
for any others you would at
any time like to have named.

Yours faithfully

P.S. A. W. Gibb

Hope the cylinder is going down!
by dynamite!

University of Aberdeen.

June 5.

My dear Mr. Conway,

Please accept my
best thanks for the specimens,
which don't lose anything on
closer inspection: and also
for the very detailed map &
section which you have been
good enough to send along
with them, and which I am
