Projects on the acoustic monitoring of animals in natural habitats generally face the problem of managing extensive amounts of data, both needed for - and produced by - observation or experimentation. While there are many publicly accessible databases for recordings themselves, we are aware of none for annotated song sequences. In this paper, we describe our database system of bird vocalizations and introduce our online sample repository for the community of researchers studying the syntax of bird song. © 2015 Elsevier B.V.

SciVal Topic Prominence

Topic: [Birds](#) | [Acoustics](#) | [audio recordings](#)

Prominence percentile: 93.528

Author keywords

Bioacoustics; Bird song; Birdsong syntax; Database; Phrase sequence

Indexed keywords

GEOBASE Subject Index:	Bioacoustics; bird; database; experimental study; habitat type; observational method; song; vocalization
Species Index:	Animalia; Aves
